Introduction

About Air Quality e-Reporting System

The “Plans and Programs” reporting system is created for EEA within the “INSPIRE/Air quality” pilot, being implemented at the Digital Earth and Reference Data unit, Joint Research Centre. The software is made available under the “European Union Public License”.

Browser Support

The system has been tested to work correctly with the following browsers:

- Chrome 36
- Firefox 30
- Internet Explorer 9, 10 and 11

If you are experiencing any problems with the system try to use one of the web browsers listed above.

Air Quality e-Reporting System Homepage

To start using the system go to <http://inspireaq.jrc.ec.europa.eu/aqrsystem>. The homepage provides introductory information and login button.

1

You will be redirected to the European Commission Authentication Service (ECAS) website

1. Access to the Air Quality eReporting system is granted based on email addresses
2. Make sure that you have been granted access to the system by EEA or the relevant national authorities
3. Log in to ECAS using an ECAS account created for your professional email address
4. If you do not have an ECAS account yet follow the link and create one
5. In case of any problems contact aq-dev@jrc.ec.europa.eu

 Login using ECAS

2

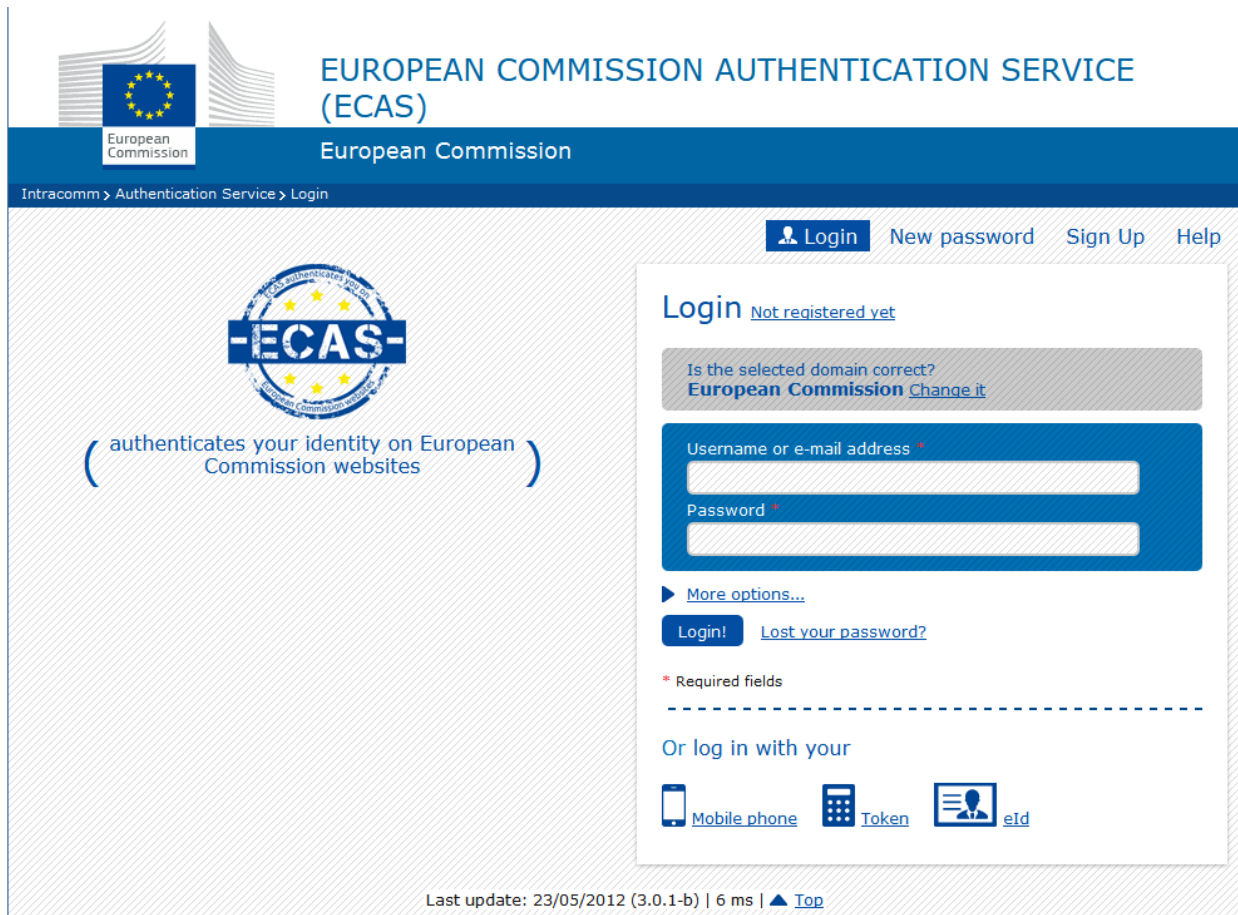

1. **Introductory information about the access to the system.**
2. **The login button.** To access the system the login button needs to be clicked. It redirects the user to ECAS, which is the European Commission Authentication System (see ECAS – User Authentication)
3. **Language selection field.** The system has been localised into the European languages. To change the currently used language use the language selection field.
4. **Top menu.** The top menu provides additional information and links, e.g. the contact details.

ECAS – User Authentication

ECAS is the European Commission's Authentication Service. It is a single sign-on system, which means that one username and password can be used to access a range of European Commission systems. Once you've used ECAS to log in to a website or service, you will not be required to re-authenticate for other EC systems.

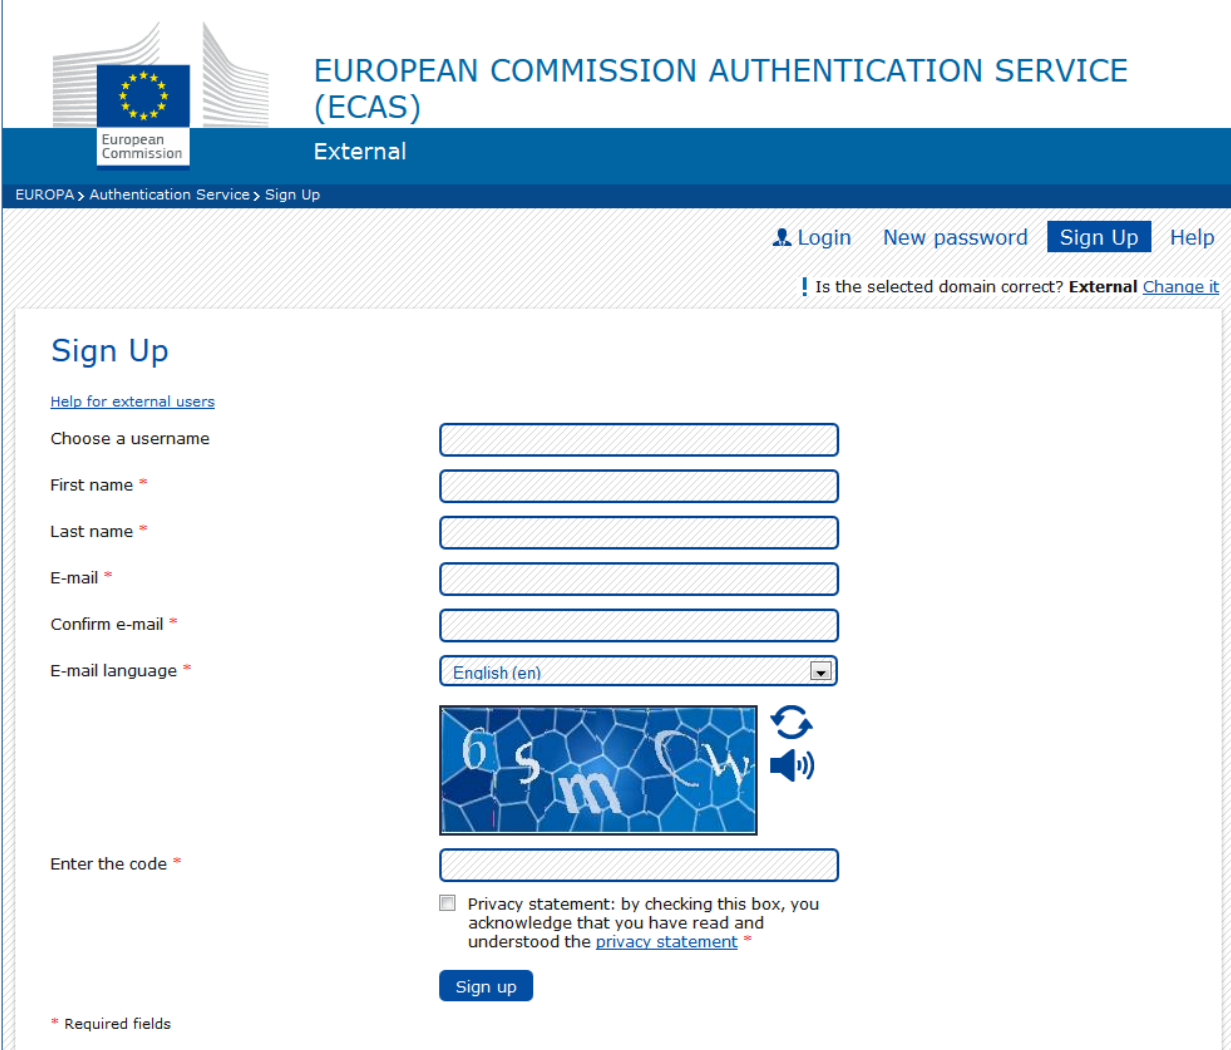

To be able to use the Air Quality eReporting System users need to create an ECAS account, as well as they need to be given access rights by the administrator of the Air Quality eReporting System.

To register to the ECAS services, you have to visit the ECAS website: <https://webgate.ec.europa.eu/cas> and click on the „Sign Up” link.

The screenshot shows the ECAS login interface. At the top, there is a header with the European Commission logo and the text "EUROPEAN COMMISSION AUTHENTICATION SERVICE (ECAS)". Below this is a navigation bar with "European Commission" and "Intracomm > Authentication Service > Login". The main content area features a large "ECAS" logo on the left, which states "(authenticates your identity on European Commission websites)". On the right, there is a "Login" section with a "Not registered yet" link. Below this, a message asks "Is the selected domain correct?" with "European Commission" selected and a "Change it" link. There are input fields for "Username or e-mail address" and "Password", both marked with an asterisk. Below these fields is a "More options..." link. A "Login!" button is present, along with a "Lost your password?" link. A section titled "Or log in with your" includes icons for "Mobile phone", "Token", and "eId". At the bottom, a footer indicates "Last update: 23/05/2012 (3.0.1-b) | 6 ms | Top".

The registration page will be displayed.

The screenshot shows the 'Sign Up' page of the European Commission Authentication Service (ECAS) for external users. The page has a blue header with the European Commission logo and the text 'EUROPEAN COMMISSION AUTHENTICATION SERVICE (ECAS) External'. Below the header, there is a navigation bar with links for 'Login', 'New password', 'Sign Up', and 'Help'. A warning message states: '! Is the selected domain correct? External [Change it](#)'. The main content area is titled 'Sign Up' and includes a link for 'Help for external users'. The registration form consists of several fields: 'Choose a username', 'First name *', 'Last name *', 'E-mail *', 'Confirm e-mail *', and 'E-mail language *' (set to 'English (en)'). There is a CAPTCHA image showing the code '65mCw' and a 'Enter the code *' field. A checkbox for the 'Privacy statement' is present, with a link to the 'privacy statement *'. A 'Sign up' button is at the bottom right. A legend indicates that '*' denotes required fields.

Please provide the required data, click the “Sign up” button, and confirm your email address by clicking the link in the email that you should receive immediately after registration.

Logging in to the system next time, make sure that you log in to the **External domain**.

If you are not in the External domain, you have to change it by clicking to “**Change it**” (2) and then selecting “**Neither an institution nor a European body**” (3) and also select “**Remember my choice**” (4).

EUROPEAN COMMISSION AUTHENTICATION SERVICE (ECAS)

You can learn more about the ECAS authentication in the HELP menu of the above mentioned website.

User Roles

The Air Quality eReporting System has three types of users:

- *EEA Administrators* - who can grant access to each of the countries
- *National Administrators* - who can administer the country related settings of the system as well as may develop reports themselves
- *Users* - who can use the system to develop reports for a certain country

The list of the features that users of each type can use is given below.

Feature	EEA Administrator	National Administrator	User
View data of all the countries	✓		
View data of one country		✓	✓
Edit/Delete reports of the country			
Edit/Delete reports created by you		✓	✓
Clone items		✓	✓
Export items to XML		✓	✓
Import XML files		✓	✓
Upload data from Flow G		✓	✓
Manage users of all countries	✓		
Manage users of the country		✓	
Manage country namespace		✓	
Manage the default provider details		✓	✓

National Spaces

Users of the **Air Quality eReporting System** work within national spaces. This means that:

- National Administrators and Users can only view the data of their own country.
- The National Administrator can change the namespace of the country, which will have impact on all the users from this country.
- The National Administrators and Users can upload data from Flow G, which will be available to all the users from their country.
- The National Administrators and Users see the statistics of data from their country.
- The National Administrators and Users can only link in their reports to items from their country.

Reporting

Main Tabs

When you log in to the system you will see six tabs at the top of the screen, just under the European Commission banner. These tabs represent six main areas of the system that the user should get familiar with.

The purpose of the tabs is as follows:

1. **Home.** This tab contains statistics about the data in the system of the country of the user.
2. **Plan.** The tab for reporting flow H data.
3. **Source Apportionment.** The tab for reporting flow I data.
4. **Evaluation Scenario.** The tab for reporting flow J data.
5. **Measures.** The tab for reporting flow K data.
6. **Settings.** Additional settings, user management, Flow G data upload.

Home Tab

The Home tab contains statistical summary of the data in the system. Users and national administrators see information about their country. EEA administrators see information about the whole system.

The screenshot shows the user interface of the AIR QUALITY eREPORTING SYSTEM. At the top right, there are links for 'About', 'Contact', 'Legal notice', and 'Logout', along with a user email address. The main header features the European Commission logo and the system title. Below this is a navigation bar with tabs for 'Home', 'H: Plan', 'I: Source Apportionment', 'J: Evaluation Scenario', 'K: Measures', and 'Settings'. The 'Home' tab is selected, displaying a 'Statistics' section with four columns: 'Plans', 'Source apportionments', 'Evaluation scenarios', and 'Measures'. Each column lists the number of drafts and completed items.

Plans	Source apportionments	Evaluation scenarios	Measures
<ul style="list-style-type: none">Draft: 3Complete: 6	<ul style="list-style-type: none">Draft: 4Complete: 0	<ul style="list-style-type: none">Draft: 2Complete: 1	<ul style="list-style-type: none">Draft: 2Complete: 1

Creating Reports

Users and National Users can create new items for each of the flows. To this end they need to click the “Create” button (1). As a result a new item will be added to the table. The system will automatically populate the “Provider” section with the data in the “Default Provider” section of the Settings tab. The namespace will as well be automatically populated taking the value from the configuration settings of the country, which are maintained by the national administrator.

The newly created item will be visible to all the users and national administrators of the country, as well as to the EEA administrators. The person who created the item will be the only one, though, with the right to edit the item.

To view and edit an item just click its name in the table (2), and you will be redirected to the edit view.

Showing 1 to 2 of 2 entries

[First](#) | [Previous](#) | [Next](#) | [Last](#)

Each of the items in the table has a status, which is either “DRAFT” or “COMPLETE”. This indicates whether or not all the required data has been provided.

Editing Reports

The edit forms for all the flows are designed in a uniform way. They are composed of a relatively lengthy main form, which refers to smaller forms that are opened in dialog boxes.

The main form is composed of standard data input fields (1, 2).

Mandatory fields are marked (3) with a red asterisk. Incomplete items, with missing mandatory fields may be saved though. However, as long as some of the mandatory fields are missing the status of the item will be “DRAFT”.

Showing 1 to 3 of 3 entries			First Previous 1 Next Last	

If the item is saved as a "DRAFT" the system will display a message explaining which of the mandatory fields are still missing (2).

Selecting Multiple Items in a List

In many of the forms of the system it is required to select more than one value from a list of provided values, as in the example below (1).

Classification

K.2.5 Classification *

Low emission stationary combustion sources
Low emission fuels for stationary and mobile sources
New vehicles, including low emission vehicles
Other (Public procurement)

Values from
<http://dd.eionet.europa.eu/vocabulary/aq/measureclassification>

Selection of the items in these controls follows the conventions known from other web systems.

To select several items just press and hold the **Ctrl** button on your keyboard and click the selected items in the list.

To unselect items just press and hold the **Ctrl** button on your keyboard and click the items you wish to unselect.

XML Export

Each user can export the items from his country. All the items can be exported, i.e. the ones that the user created as well as the items created by other users from his country.

[Home](#)
[H: Plan](#)
[I: Source Apportionment](#)
[J: Evaluation Scenario](#)
[K: Measures](#)

Clicking the "Import" button opens the import dialog (2).

The import dialog provides an example of an XML file, which can be downloaded and used to understand the structure of the file to be imported (3), when needed.

To import a file it must be selected (4), and the “Import” button (5) must be clicked.
It is possible that the import procedure will terminate with an error message (6).

Total file size [15310195 bytes] exceeds the limit [10485760 bytes]

The most common reasons of unsuccessful import of an XML file are: an attempt to import a file which exceeds the size limit (set at the moment to 10 MB), or an attempt to import a file with incorrect structure (all imported files must validate against <http://dd.eionet.europa.eu/schemas/id2011850eu-1.0/AirQualityReporting.xsd>).

Administration

Default Provider

Each of the main items created in the tabs for flows H-K includes a set of fields defining the data provider. As this information is repetitive and usually constant for a single user it is possible to define this information once, and then reuse it for any of the new items created.

To define the default data provider you need to go to the “Settings” tab (1) and select “Default provider” (2). These settings are available for users and national administrators only.

In the “Default provider” tab it is possible to provide the content for all the fields that describe the provider. The new settings can be saved using the “Save” button (3).

Home H: Plan I: Source Apportionment J: Evaluation Scenario K: Measures **Settings** (1)

(3)

Upload of Flow G Data

Some of the items from flows H-K need to refer to items from flow G. To this end, the data must be uploaded to the system prior to any reference to it is made.

To upload flow G data with a list of Attainments you need to select the “Settings” tab (1) and then the “G: Attainments” section (2). This section provides the “Import” button (3), with which a file can be selected and uploaded. A list of all the uploaded Attainments (4) for the country of the user is available as well.

The screenshot shows the user interface of the Air Quality eReporting System. At the top, there is a navigation bar with tabs: Home, H: Plan, I: Source Apportionment, J: Evaluation Scenario, K: Measures, and Settings (1). Below this, there is a sub-navigation bar with tabs: G: Attainments (2), User management, Default namespace, and Default provider. The main content area is titled 'G: Attainments' and contains a section 'Uploaded data'. Inside this section, there is a list of uploaded attainments (4): GB_Attainment_1721, GB_Attainment_1728, GB_Attainment_1729, GB_Attainment_1733, and GB_Attainment_1734. At the bottom right of the main content area, there is an 'Import' button (3).

Note: The uploaded data is uploaded to the country space, which means that all the users of the country will have access to it.

Note: Before items are imported duplicates are removed.

Changing National Namespace

Each country has a namespace which is attached to the identifier of each of the items created in the system (1). This field is automatically populated whenever a new item is created and it comes from the configuration data of the country space, which are controlled by the national administrator.

Edit plan

H.1.1 INSPIRE Id

A.8.1 Local Id *	UK0001_H_NO2_2011
A.8.2 Namespace (1)	http://uk-air.defra.gov.uk/e-reporting/aq/
A.8.3 Version Id	2014-06-04.10.55.803

To change the national namespace the national administrator needs to go to the "Settings" tab (2) and select the "Default namespace" section (3). There is a form where a new namespace can be defined and saved with the "Save" button (4).

Home H: Plan I: Source Apportionment J: Evaluation Scenario K: Measures **Settings** **(2)**

G: Attainments User management **Default namespace** Default provider

Default namespace **(3)**

Default namespace *

http://uk-air.defra.gov.uk/e-reporting/aq/

(4) 

User Management

The main role of National Administrators and EEA Administrators is to define users of the system, to whom reporting responsibility can be delegated. The AQRSystem provides a user management module.

To open the user management module select the “Settings” tab (1) and the “User management” section (2). A list of existing users will be displayed (3).

Home H: Plan I: Source Apportionment J: Evaluation Scenario K: Measures **Settings**
